

- Name of website - Luma Salon
- Description of topic - The website would serve as an information website for my mothers salon. There would be a list of services with images of each and certain price listings. Along with that, there would be a contact platform with information available to potential clients. There will be separate portfolios for the Cosmetologists that work there. Basic details such as location and operating hours will be displayed as well.
- Page Names - About us, Contact, Services, Cosmetologists, Home, Set up Consultation
- Data that would be stored and collected would include potential clients information(Phone, Name, Email). Some data that will be manipulated could be a review/rating page. As for information the potential clients would be viewing, would be costs of certain services such as haircuts, colorings, highlights, waxings. Another thing that would be used for viewing would be the portfolios for the cosmetologists. As for log in security and administration for the website, I would handle that and also provide my mothers email to that as well.
